

ABSTRACT

An elongate loudspeaker apparatus which can be used at a television receiver or the like and easily manufactured is provided. The loudspeaker apparatus of the present invention is formed of an elongate printed circuit board and a plurality of loudspeakers mounted on the printed circuit board, and signal inputting parts are formed at both ends thereof. Using the structure mentioned above, the elongate loudspeaker apparatus can be easily provided by arranging the easy-manufacturing loudspeakers. In addition, the loudspeaker apparatuses disposed at both sides thereof can be coupled with a main-unit-side circuit, so that assembling devices becomes easily.
